Unsafe Harbor

- This room is an unsafe harbor
- You can rely on the information in this presentation to help you protect your data, your databases, your organization, and your career
- No one from Oracle has previewed this presentation
- No one from Oracle knows what I'm going to say
- No one from Oracle has supplied any of my materials
- Everything we will discuss is existing, proven, functionality

META7
Introduction

Daniel Morgan

- 6th OUGN Conference (2009, 2010, 2012, 2013, 2015)
- Oracle ACE Director Alumnus
- Oracle Educator
  - Curriculum author and primary program instructor at University of Washington
  - Consultant: Harvard University
  - University Guest Lecturers
    - APAC: University of Canterbury (NZ)
    - EMEA: University of Oslo (Norway)
    - Latin America: Universidad Cenfotec, Universidad Latina de Panama, Technologico de Costa Rica
- IT Professional
  - First computer: IBM 360/40 in 1969: Fortran IV
  - Oracle Database since 1988-9 and Oracle Beta Tester
  - The Morgan behind www.morganslibrary.org
  - Member Oracle Data Integration Solutions Partner Advisory Council
  - Vice President Twin Cities Oracle Users Group (Minneapolis-St. Paul)
- Principal Adviser: Forsythe **Meta7** a Sirius Company

Meta7 In Forbes Magazine

3 Essential DBA Career Priorities For 2018

OracleVoice
Simplify IT, Drive Innovation FULL BIO ⌄

Jeff Erickson, Oracle

Many database administrators (DBAs) will go into 2018 wondering if "self-driving" databases will weaken their career prospects. More likely, 2018 will be a year that database technology leaps forward and these valuable data experts take on other, more important responsibilities.

"History is repeating itself," says longtime DBA Dan Morgan, founder of Morgan's Library and principal adviser at tech firm Meta7. Morgan has seen the DBA role evolve amid a long series of technical advances in storage, management, and performance. And each advance asked DBAs to adjust the way they work.

META7™

Introduction to Security

© KIPAC, AMNH

Why Am I Focusing On Oracle Database Security Today?

- Because OEM's, like Oracle, talk about their products about not security
- Because most organizations spend/waste their money on perimeter defense
- Because no one teaches operational security to Application Developers
- Because no one teaches operational security to
    - Application Admins
    - Network Admins
    - Storage Admins
    - System Admins
    - DBAs
    - IT Management
- Because most of what is implemented can be by-passed within minutes
- ... which is obvious given the number of systems broken into every day

META7™

Security Training

- Let's have a show of hands
  - Has your current employer provided you with a class on securing an Oracle Database?
  - Has your current employer paid for you to take formal security classes?
  - Does your current employer have a document that states security criteria that <u>must</u> be followed for your organization's Oracle databases?
  - Is it followed?
  - Has any employer in your entire career provided you with training or a formally published security document specific to Oracle databases?
  - Is the total extent of your personal on-the-job security training someone telling you not to open emails from Nigerian royalty offering you millions of dollars?
- Has anyone here heard of any resource on the planet where their employer could send them to receive training on how to secure an Oracle Database?

META7

The 99:01 Rule

- Forget the 80:20 rule
- 99% of the efforts of the organizations we work for focus on passing audits
- 99% of the money spent on security focuses on
    - Compliance with government and industry regulations
    - Meeting contractually agreed-to terms
    - Auditing which is NOT security and is essentially irrelevant to security

- Everyone in this room can name dozens of organizations broken into recently

`Office of Personnel Management` `Equifax` `Experian` `Uber` `Yahoo`

`Sony` `Verizon` `Deep Root Analytics` `SWIFT` `Intercontinental Hotels`

- Every one of them ... EVERY ONE ... passed their audits

META7

From A Security Standpoint This Is All Irrelevant Distraction

Map View: Robinson Projection

AMERICAS
- SarbOx
- HIPAA
- PCI
- FDA CFR 21 Part 11
- OMB Circular A-123
- SEC and DoD Records Retention
- DFARS
- USA Patriot Act
- Gramm-Leach-Bliley Act
- Federal Sentencing Guidelines
- Foreign Corrupt Practices Act
- Market Instruments 52 (Canada)

EMEA
- EU Privacy Directives
- UK Companies Law

APAC
- J-SOX (Japan)
- CLERP 9: Audit Reform and Corporate Disclosure Act (Australia)
- Stock Exchange of Thailand Code on Corporate Governance

GLOBAL
- International Accounting Standards
- Basel II (Global Banking)
- OECD Guidelines on Corporate Governance

META7™

Misdirected By The Web

- What does the IC3 have to do with securing data?
- Nothing!
- All of this is focused on how cyber-criminals get login credentials
- Not one byte relates to how, once credentials are stolen, the data can be protected

Federal Bureau of Investigation Internet Crime Complaint Center(IC3)

Home   File a Complaint   Press Room   About IC3   Lost Password

META7™

Misdirected By Our Vendors

- A great tool for selling Data Masking, Data Redaction, and Advanced Security Option licenses
- Not so great at doing what its title says it does

The Real Risks

How Database Breaches Really Occur

- 48% involve privilege misuse
- 40% result from hacking

Types of hacking by percent of breaches within hacking and percent of records

Valid login credentials	38% / **86%**
Exploited backdoor or command/control channel	29% / **5%**
SQL Injection	25% / **89%**
- 38% utilized malware
- 28% employed social engineering
- 15% physical attacks

Percentages do not add up to 100% because many breaches employed multiple tactics in parallel or were outliers

META7™

Internal vs. External Threats

- Most organizations focus on the least likely threats and ignore what has been historically proven to be the greatest threat
- The following is quoted from "Reference for Business" on the subject of computer crimes

> As criminologist and computer-insurance executive Ron Hale indicated to Tim McCollum of *Nation's Business,* one of the most unsettling facts about computer crime is that **the greatest threat to information security for small businesses is their employees.** As McCollum noted, **"a company's employees typically have access to its personal computers and computer networks, and often they know precisely what business information is valuable and where to find it."** The reasons for these betrayals are many, ranging from workplace dissatisfaction to financial or family difficulties.
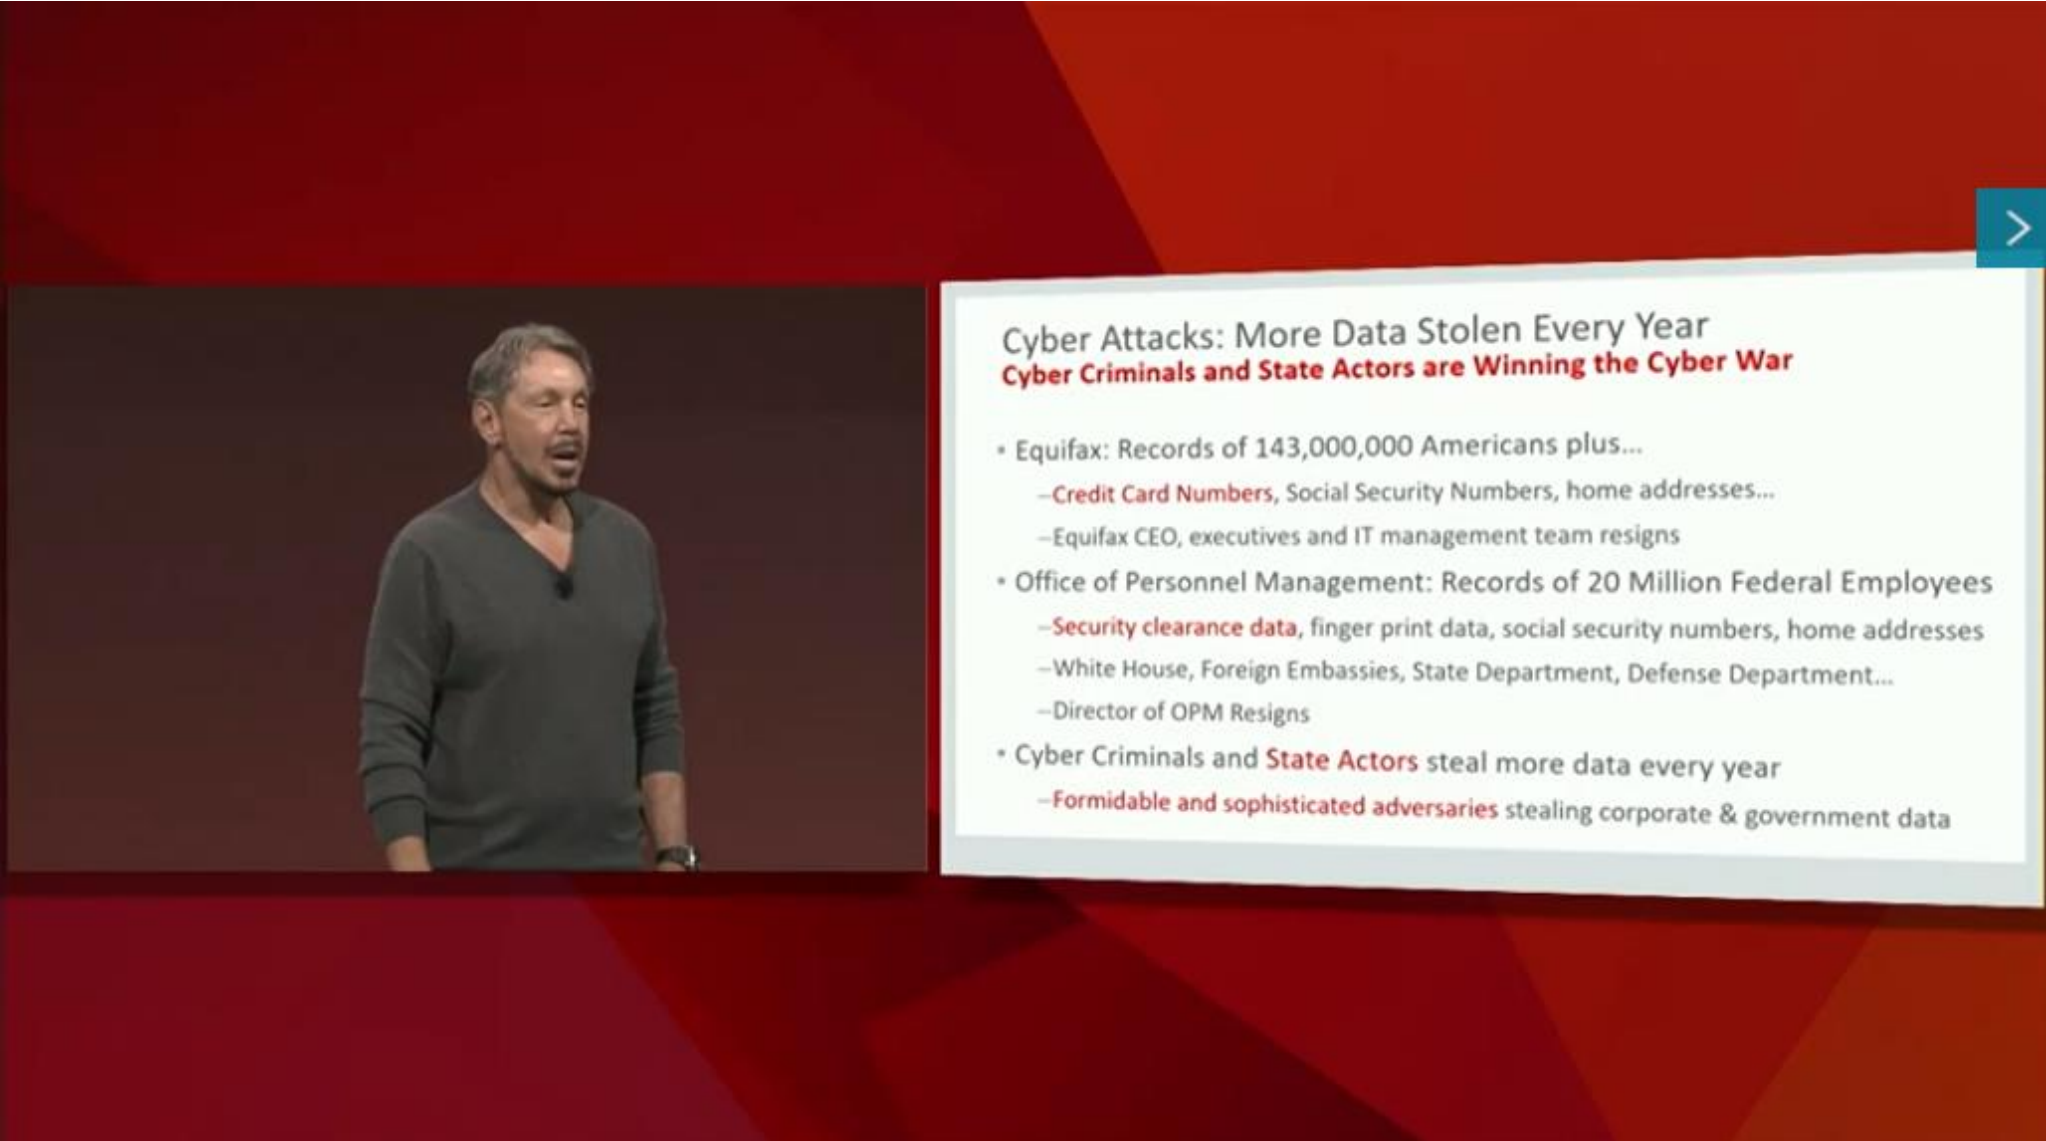

- When organizations focus on their firewall they are focusing on what is often the most expensive, yet least effective, protection against data theft
- Part of our job is to provide solutions that address vulnerabilities and minimize our organization's risk exposure
- The other part is to be educators ... to educate our internal and external customers the nature of real-world threats
- The education needs to come from us ... not from someone in sales

META7

CYBER WAR

A conflict without foot soldiers, guns, or missiles

Anyone want to play chess with Deep Blue?

Anyone want to take a shot at AlphaGo?

The threat is not a bunch of 20 year old script kiddies

If the threat is an organized crime family you will find your data being sold on the dark web

If the threat is a nation-state you will find your data being used to attack your country, your community, your family

META7™

And We Are Arming Ourselves

Database Risks

- Most databases break-ins are never detected and thus never reported
- What you hear about is the part of the iceberg above the water
- Database related risks fall into three broad categories
  - Data Theft
  - Data Alteration
  - Transforming the database into an attack tool
- To accomplish the above activities requires gaining access and doing so generally falls into one of the following categories
  - Utilizing granted privileges and privilege escalation
  - Access to Oracle built-in packages
  - SQL Injection attacks

```
SQL> select utl_inaddr.get_host_address('www.umn.edu') from dual;

UTL_INADDR.GET_HOST_ADDRESS('WWW.UMN.EDU')
------------------------------------------
134.84.119.107

SQL> select utl_inaddr.get_host_name('134.84.119.025') from dual;

UTL_INADDR.GET_HOST_NAME('134.84.119.025')
------------------------------------------
g-smtp-w.tc.umn.edu
```

- It takes precisely this much PL/SQL to compromise an internal network

```
DECLARE
 h_name  VARCHAR2(60);
 test_ip VARCHAR2(12)  := '134.84.119.';
 suffixn NUMBER(3)  := 0;
 suffixv VARCHAR2(4);
BEGIN
  FOR i IN 1 .. 255 LOOP
    suffixn := suffixn + 1;
    IF suffixn < 10 THEN suffixv := '00' || TO_CHAR(suffixn);
    ELSIF suffixn BETWEEN 10 and 99 THEN suffixv := '0' || TO_CHAR(suffixn);
    ELSE suffixv := TO_CHAR(suffixn); END IF;
    BEGIN
      SELECT utl_inaddr.get_host_name(test_ip || suffixv)
      INTO h_name
      FROM dual;
      dbms_output.put_line(test_ip || suffixv || ' - ' || h_name);
    EXCEPTION WHEN OTHERS THEN NULL;
    END;
  END LOOP;
END;
/
```

- The listing output

```

META7™

Shifting Our Paradigm

META7™
© KIPAC/AMNH

First Concept

- To be successful you must accept the following

Break-ins will occur.

Those who fail to study history are doomed to repeat it.

META7™

Second Concept

- To be successful you must accept the following

`Your job is increase the difficulty of breaking in.`

If your management doesn't grasp this reality then it is your responsibility to explain it to them.

META7™

Third Concept

- To be successful you must accept the following

When someone breaks the system must be configured to limit the damage.

On Installation
- Disable the DEFAULT profile
- Revoke almost all privileges granted to PUBLIC
- Enable all of the database's default security capabilities

After Installation
- Apply security patches immediately
- Stop using cron - use DBMS_SCHEDULER
- Change passwords regularly
- Do not grant the CONNECT, RESOURCE, or DBA roles ever
- Use Proxy Users for every user you create
- Implement Database Vault
- Implement Row Level Security

- There is always someone inside the firewall,

- Always someone with access,

- There is a big difference between accessing one record ... and accessing everything

- Most databases in the US are configured so that once someone breaks in they get everything
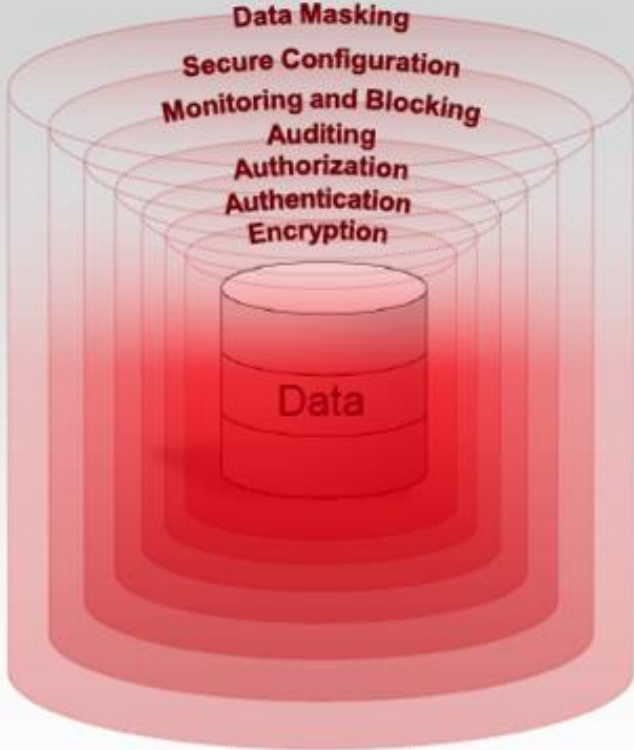

Oracle's Larry Ellison decries poor state of security,

"We need much better security," Ellison said Tuesday in a speech at Oracle OpenWorld. "We need a next generation of security because we're not winning a lot of these cyberbattles. We haven't lost the war, but we're losing a lot of battles."

An Oracle Corporate View of Security

- Very valuable ... but insufficient

Data Masking
Secure Configuration
Monitoring and Blocking
Auditing

- Oracle Database Vault
- Oracle Label Security
- Oracle Audit Vault
- Oracle Total Recall
- Oracle Database Firewall
- Oracle Configuration Management
- Oracle Data Masking

Comprehensive – Transparent – Easy to Deploy – Proven!

- Security requires that you implement what is "free" too

META7™

Virtual Private Database aka Row Level Security (VPD / RLS)

- Provides row-level security at the database table or view level
- Can be extended to provide column-level security as well
- Essentially, creates or modifies an existing WHERE clause rewriting a query in the optimizer so that the query cannot return restricted rows or columns
- Based on the built-in DBMS_RLS package

```
FUNCTION empview_sec(owner VARCHAR2, objname VARCHAR2) RETURN VARCHAR2 IS
 predicate VARCHAR2(2000);
BEGIN
  IF (sys_context('exp_rpt', 'exp_role') = 'manager') THEN
    predicate := 'cost_center_id = sys_context(''exp_rpt'', ''cc_number'')';
  ELSE
    predicate := 'employee_id = sys_context(''exp_rpt'', ''emp_number'')';
  END IF;
  RETURN predicate;
END empview_sec;
```

META7™

Perimeter Defense

Database Networks

- Attempts are being made essentially 7 x 24 x 365 to attack your organizations
- If you do not know this then you have insufficient monitoring and most likely many of the attempts are success
- A small division of one of America's largest retailers has not been able to identify a single 24 hour period in the last 5 years during which there was not at least one serious, professional, attempt to access their data

- Perimeter defense has never worked
- Did any castle ever built survive all attacks?
- Did the "impenetrable" Maginot line protect France?
- Did every major break-in in you have ever heard of only succeed because the target didn't have a firewall? Or Identity Management?

Breach exposes at least 58 million accounts, includes names, jobs, and more

With 2 months left, more than 2.2 billion records dumped so far in 2016.

DAN GOODIN - 10/12/2016, 2:29 PM

© Hefin Richards

META7™

- Many organizations think they are protected because they have a firewall
- The following example is real and came from a customer security audit
- The firewall's configuration, discovered during an audit, allowed direct access from the internet (UNTRUST) to the database servers (BUSINESS-DATA)
- The organization's employees did not understand the rules they wrote

```
ICMP Allowed from outside to Business-Data Zone

set security policies from-zone UNTRUST to-zone Business-Data policy BD-Ping match source-address any

set security policies from-zone UNTRUST to-zone Business-Data policy BD-Ping match destination-address any

set security policies from-zone UNTRUST to-zone Business-Data policy BD-Ping match application junos-ping

set security policies from-zone UNTRUST to-zone Business-Data policy BD-Ping then permit

set security policies from-zone UNTRUST to-zone Business-Data policy BD-Ping then log session-close
```

META7™

- A firewall should give you no sense of comfort
- Here is another firewall rule set-up discovered during a security audit
- This example cancels the stateful feature of the firewall and make it just like a switch or router with security rules (ACLs)
- All traffic is allowed both from/to the outside interface with security level 0

```
dc-fwsm-app configurations

1094 access-list INBOUND-CAMPUS extended permit ip any any
3735 access-group INBOUND-CAMPUS in interface OUTSIDE
1096 access-list OUTBOUND-CAMPUS extended permit ip any any
3736 access-group OUTBOUND-CAMPUS out interface OUTSIDE

dc-fwsm-db configurations

access-list INBOUND-CAMPUS extended permit ip any any
access-group INBOUND-CAMPUS in interface OUTSIDE

access-list OUTBOUND-CAMPUS extended permit ip any any
access-group OUTBOUND-CAMPUS out interface OUTSIDE
```

META7™

Database Networks

- Every Oracle Database deployment requires multiple network connections

Name	Protocol	Utilization
Management	TCP/IP	System Admin connection to the server's light's-out management card
Public	TCP/IP	Access for applications, DBAs, exports, imports, backups: No keep-alive if RAC
SAN Storage	Fibre Channel	Server connection to a Storage Area Network (SAN)
NAS Storage	TCP/IP or IB	Connection to an NFS or DNFS mounted storage array
RAC Cache Fusion interconnect	UDP or IB	Jumbo Frames, no keep-alive, with custom configured read and write caching
Replication	TCP/IP	Data Guard and GoldenGate
Backup and Import/Export	TCP/IP	RMAN, DataPump, CommVault, Data Domain, ZFS, ZDLRA

- Every one of these networks provides access to critical infrastructure
- No conversation on networking is complete without considering firewalls, DNS and NTP servers, load balancers, and a large variety of mobile and Internet of Things devices

Example Minimum Environment

META7™

Security Support Resources

STIG (1:3)

`http://iase.disa.mil/stigs/Pages/index.aspx`

- A STIG is a Security Technical Implementation Guide produced or approved by the US Department of Defense
- Oracle has published STIGs at My Oracle Support for Exadata and ODA
  - But the "CHECK" option can be run on any Linux server
- Oracle Support provides a downloadable script that can be used to check an ODA against STIG requirements and identify three levels of violations
- We strongly recommend running the script with the `-check` option but recommend having your Linux System Admin correct those issues you wish to correct manually

Warning: Never run the STIG script with the -fix option

- Ctrl-Alt-Del combination to shutdown system is enabled
- Password for grub not enabled
- Privilege account 'halt' is present
- Privilege account 'shutdown' is present
- RealVNC rpm is installed on system
- sendmail decode command is not commented in /etc/aliases
- Support for USB device found in kernel

META7

STIG (3:3)

Center For Internet Security (CIS)

- CIS is the source of audit guidelines and auditors for e-commerce websites

https://www.cisecurity.org

User Management

Application Access

- At many major Oracle customers there are two types of users defined
  - human: a sentient human will user this user-id to log on
  - mechid: an application or application server will use this user-id to connect
- All application schemas should be created with a mechid
- Application schemas should be granted the privileges required to create objects then
  - Revoke all system privileges from the application schema
  - Lock the schema and expire the password
  - Audit attempts to log onto the application schema directly

```
SQL> ALTER USER ps ACCOUNT LOCK;
SQL> REVOKE create session FROM ps;
SQL> REVOKE create table FROM ps;
SQL> REVOKE create procedure FROM ps;
SQL> REVOKE create view FROM ps;
SQL> ... enable auditing
```

New Users With Escalated Privs

USERNAME	Usage
GGSYS	The internal account used by Oracle GoldenGate. It should not be unlocked or used for a database login.
SYSBACKUP	This privilege allows a user to perform backup and recovery operations either from Oracle Recovery Manager (RMAN) or SQL*Plus.
SYSDG	This privilege allows a user to perform Data Guard operations can use this privilege with either Data Guard Broker or the DGMGRL command-line interface.
SYSKM	This privilege allows a user to perform Transparent Data Encryption keystore operations.
SYSRAC	This privilege allows the Oracle agent of Oracle Clusterware to perform Oracle Real Application Clusters (Oracle RAC) operations. SYSRAC facilitates Oracle Real Application Clusters (Oracle RAC) operations by connecting to the database by the Clusterware agent on behalf of Oracle RAC utilities such as SRVCTL.

META7™

- Here's what the Oracle docs say about proxy users: They are not wrong but incomplete and misleading

About Proxy Authentication

Proxy authentication is the process of using a middle-tier for user authentication. You can design a middle-tier server to proxy clients in a secure fashion by using the following three forms of proxy authentication:

  - The source of the above statement is the "Database JDBC Developer's Guide

- Here's what Tom Kyte wrote ...

and we said...

```
a proxy user is a user that is allowed to "connect on behalf of another user"

say you have a middle tier application.  You want to use a connection pool.  You need to
use a single user for that.  Say that user is "midtier"

Scott can grant connect through to this midtier user.
```

- And, of course Tom Kyte was correct

META7™

- ... and proxy users cannot be spoofed

So now the midtier user (which has just "create session" and "connect through to scott")
authenticates to the database and sets up the connection pool. This midtier user is just
a regular user -- anything you can do to scott, you can do to midtier, but it generally
isn't relevant. For the only thing midtier will do in the database is connect really!

So, scott comes along and convinces the midtier "i am really scott". The midtier then
says to the database "you know me, I'm midtier and I'd like to pretend to be scott for a
while". the database looks and says "yes midtier, you are allowed to be scott for a while
-- go ahead". At this point -- that midtier connection will have a session where by
"select user from dual" will return SCOTT -- not midtier.

Scott never gave the midtier his password to the database, in fact, scott might not even
KNOW what his password to the database it!

Now, this SCOTT session that was created on behalf of the midtier connection is subject
to all of the rules and privs around the user SCOTT -- it can only do what scott is
allowed to do.

The nice thing about this is:

o you have auditing back, the database knows who is using it. no more of this "single
username" junk.

o you have grants back, you don't have to reinvent security over and over and over.

o you have identity preserved all of the way from the browser through the middle tier and
into the database.

```
-- create a non-human database user
SQL> CREATE USER mechid
  2   IDENTIFIED BY "A1Ac9C81292FC1CF0b8A40#5F04C0A"
  3   DEFAULT TABLESPACE uwdata
  4   TEMPORARY TABLESPACE temp
  5   QUOTA 100M ON uwdata;

User created.

SQL> ALTER USER mechid ACCOUNT LOCK;

Grant succeeded.

SQL> AUDIT CONNECT BY scott ON BEHALF OF mechid;

Audit succeeded.

-- create proxy for mechid
SQL> ALTER USER mechid GRANT CONNECT THROUGH scott;

User altered.

SQL> SELECT * FROM sys.proxy_info$;

   CLIENT#      PROXY# CREDENTIAL_TYPE#      FLAGS
---------- ---------- ---------------- ----------
       142        109                0          5
```

```
SQL> conn scott[MECHID]/tiger@pdbdev
Connected.

SQL> sho user
USER is "MECHID"

SQL> SELECT sys_context('USERENV', 'CURRENT_SCHEMA')
  2   FROM dual;

SYS_CONTEXT('USERENV','CURRENT_SCHEMA')
-------------------------------------------------
MECHID

SQL> SELECT sys_context('USERENV', 'CURRENT_USER')
  2   FROM dual;

SYS_CONTEXT('USERENV','CURRENT_USER')
-------------------------------------------------
MECHID

SQL> SELECT sys_context('USERENV', 'PROXY_USER')
  2   FROM dual;

SYS_CONTEXT('USERENV','PROXY_USER')
-------------------------------------------------
SCOTT
```

META7™

User Authentication and Permissions

- No user should be created using the default profile
- Check for default password usage
  - If you find default passwords being used either change the passwords or lock and expire the account
- Do not use externally authenticated users such as OPS$ unless you can prove that O/S access is secure and will stay that way which, of course, you cannot do
- CIS audit check 4.07 specifically checks for the use of externally authenticated access
- With applications such as EBS, SAP, Peoplesoft, Siebel, we are finding a truly staggering number of accounts that are wide open ... still using unchanged default passwords

```
SQL> SELECT d.con_id, d.username, u.account_status
  2   FROM cdb_users_with_defpwd d, cdb_users u
  3   WHERE d.username = u.username
  4   AND u.account_status = 'OPEN'
  5   ORDER BY 3,1, 2;

   CON_ID USERNAME                       ACCOUNT_STATUS
---------- ------------------------------ ---------------
        1 SYS                            OPEN
        1 SYS                            OPEN
        1 SYSTEM                         OPEN
        1 SYSTEM                         OPEN
        3 HR                             OPEN
        3 OE                             OPEN
        3 PM                             OPEN
        3 SCOTT                          OPEN
        3 SH                             OPEN
        3 SYS                            OPEN
        3 SYS                            OPEN
        3 SYSTEM                         OPEN
        3 SYSTEM                         OPEN
```

META7™

password_life_time restricts the password lifetime will help deter brute force attacks against user accounts and refresh passwords.

password_reuse_max sets the number of different passwords that must be rotated by the user before the current password can be reused. This prevents users from cycling through a few common passwords and helps ensure the integrity and strength of user credentials.

password_reuse_time sets the amount of time that must pass before a password can be reused. Creating a long window before password reuse helps protect from password brute force attacks and helps the strength and integrity of the user credential.

password_lock_time specifies the amount of time in days that the account will be locked out if the maximum number of authentication attempts has been reached.

password_grace_time specified in days the amount of time that the user is warned to change their password before their password expires.

PASSWORD_VERIFY_FUNCTION ora12c_verify_function;
```

- Uncomment the CIS or STIG profiles for improved security

```
/**
The below set of password profile parameters would take into consideration
recommendations from Center for Internet Security[CIS Oracle 11g].

ALTER PROFILE DEFAULT LIMIT
PASSWORD_LIFE_TIME 180
PASSWORD_GRACE_TIME 7
PASSWORD_REUSE_TIME UNLIMITED
PASSWORD_REUSE_MAX  UNLIMITED
FAILED_LOGIN_ATTEMPTS 10
PASSWORD_LOCK_TIME 1
INACTIVE_ACCOUNT_TIME UNLIMITED
PASSWORD_VERIFY_FUNCTION ora12c_verify_function;
*/

/**
The below set of password profile parameters would take into
consideration recommendations from Department of Defense Database
Security Technical Implementation Guide[STIG v8R1].

ALTER PROFILE DEFAULT LIMIT
PASSWORD_LIFE_TIME 60
PASSWORD_REUSE_TIME 365
PASSWORD_REUSE_MAX  5
FAILED_LOGIN_ATTEMPTS 3
PASSWORD_VERIFY_FUNCTION ora12c_strong_verify_function;*/
```

Secure Configuration

- A script run as part of installation that creates a "secure configuration"
- Review the script `$ORACLE_HOME/rdbms/admin/secconf.sql`

> Rem   Secure configuration settings for the database include a reasonable
> Rem   default password profile, password complexity checks, audit settings
> Rem   (enabled, with admin actions audited), and as many revokes from PUBLIC
> Rem   as possible. In the first phase, only the default password profile is included.

Can perform the following
- Modifies the Default profile
- Creates audit policy: ORA_ACCOUNT_MGMT
- Creates audit policy: ORA_DATABASE_PARAMETER
- Creates audit policy: ORA_LOGON_FAILURES
- Creates audit policy: ORA_SECURECONFIG
- Creates audit policy: ORA_CIS_RECOMMENDATIONS

- Executed indirectly when `$ORACLE_HOME/rdbms/admin/catproc.sql` is run

- Roles can be further protected through passwords and PL/SQL package validation

```sql
-- role secured by password
CREATE ROLE read_only IDENTIFIED BY "S0^Sorry";

-- role secured by PL/SQL package
CREATE OR REPLACE PACKAGE db_security AUTHID CURRENT_USER IS
  PROCEDURE enable_role;
END db_security;
/

CREATE OR REPLACE PACKAGE BODY db_security IS
  PROCEDURE enable_role IS
  BEGIN
    dbms_session.set_role('read_only');
  END enable_role;
END db_security;
/

SELECT * FROM dba_application_roles;

CREATE ROLE read_only IDENTIFIED USING db_security;
```

- A PL/SQL package can perform numerous tests to identify the user and their connection before granting access
- If the package object returns an exception the role is not granted

System & Object Privs

Granting Privileges

- The rule is simple ... never grant privileges in excess of those required to perform a specified job function
- Don't grant "ANY" privileges without documented justification
- If you have not done so in the last 12 months review all users for their system privileges and revoke those not required
- There is literally no excuse for granting Oracle's DBA role to any user
  - No one should have privileges they don't need and don't know what they do

META7

System Privileges Granted to the DBA Role

```
SQL> select privilege
  2  FROM dba_sys_privs
  3  WHERE grantee = 'DBA'
  4  ORDER BY 1;

SELECT ANY DICTIONARY (altered in 12.1.0.2 to exclude some objects)

- The rule is simple ... never grant privileges to objects that are not required
- If granting access to a table you have choices
  - SELECT
  - INSERT
  - UPDATE
  - DELETE
- If granting update privileges control by column whenever possible

```
GRANT UPDATE (first_name, last_name) ON person TO uwclass;
```

- No data has ever been stolen because the privileges were too granular or because someone had insufficient privileges

- Review each of these grants to PUBLIC and determine which are necessary and which put your database and data at risk
- Before removing any granted privilege be sure to validate the non-impact of the change in a QA environment

```
SELECT 'REVOKE SELECT ON ' || table_name || ' FROM PUBLIC;' AS RUN_SCRIPT

  3  WHERE table_name = 'ALL_SOURCE';

GRANTEE
------------------------------
PUBLIC
DV_SECANALYST
```

- Anyone that can query Oracle X$ and/or V$ objects can bypass the vast majority of Oracle Database security
- Some of the objects that are critically important to protect are
    - V_$MAPPED_SQL
    - V_$SQL
    - V_$SQLAREA
    - V_$SQLAREA_PLAN_HASH
    - V_$SQLSTATS
    - V_$SQLSTATS_PLAN_HASH
    - V_$SQLTEXT
    - V_$SQLTEXT_WITH_NEWLINES
    - V_$SQL_BIND_CAPTURE
    - V_$SQL_BIND_DATA
    - V_$SQL_OPTIMIZER_ENV
    - V_$SQL_PLAN

- If data is not encrypted before DML the original statement can be recovered
- Transparent Data Encryption (TDE) offers no protection from this attack

```
SQL> CREATE TABLE credit_card (
  2   ccno  VARCHAR2(19),
  3   cname VARCHAR2(25));

Table created.

SQL> INSERT /* memtest */ INTO credit_card
  2   VALUES ('5123-4567-8901-2345', 'Dan Morgan');

1 row created.

SQL> SELECT sql_id, sql_fulltext
  2   FROM v$sqlarea
  3   WHERE sql_fulltext LIKE '%memtest%';

SQL_ID        SQL_FULLTEXT
------------- -----------------------------------------------------------------------
fy44ug06np5w4 INSERT /* memtest */ INTO credit_card
              VALUES ('5123-4567-8901-2345', 'Dan Morgan')

5d4p3uz59b0a1 SELECT sql_id, sql_fulltext♂FROM v$sqlarea♂WHERE sql_fulltext LIKE '%memtest3%'
```

META7™

X$ Object Access

- X$ objects are a queryable view into database memory

```
SQL> SELECT * FROM X$KZDPSUPSF;

ADDR              INDX  INST_ID  CON_ID KZDPSUPSFNM                KZDPSUPSFFN             KZDPSUPSFCOM
---------------- ----- -------- ------- -------------------------- ----------------------- ---------------------------------------------------
00007FF685ABAB40     0        1       0 DATA REDACTION             ALL                     Supports all data redaction functionality (DBMS_REDACT).
00007FF685ABAB58     1        1       0 VIRTUAL PRIVATE DATABASE    OBJECT-LEVEL POLICY     Supports object-level VPD policies.
00007FF685ABAB70     2        1       0 VIRTUAL PRIVATE DATABASE    COLUMN-LEVEL POLICY     Supports column-level VPD policies. This corresponds to the
                                                                                           SEC_RELEVANT_COL parameter functionality provided by DBMS_RLS.ADD_POLICY.
00007FF685ABAB88     3        1       0 UNIFIED AUDIT              OBJECT-LEVEL POLICY     Supports object-level Unified Audit policies.
00007FF685ABABA0     4        1       0 FINE GRAINED AUDIT         ALL                     Supports all fine grained audit functionality (DBMS_FGA).
00007FF685ABABB8     5        1       0 TRANSPARENT DATA ENCRYPTION COLUMN-LEVEL ENCRYPTION Supports TDE Column level encryption.
```

ORADEBUG

- Anyone with access to ORADEBUG can view everything in the database's memory structures

```
source: catmacp.sql

-- Control ORADEBUG in Database Vault environment
  PROCEDURE enable_oradebug;

  PROCEDURE disable_oradebug;
  PRAGMA SUPPLEMENTAL_LOG_DATA(disable_oradebug, AUTO_WITH_COMMIT);
```

DBMS_SYS_SQL

- This is, undeniably, the single most dangerous PL/SQL package inside your Oracle Database
  - DBMS_SYS_SQL
  - PARSE_AS_USER
  - 32 Overloads

```
CREATE OR REPLACE PROCEDURE create_sequence(seqname IN VARCHAR2, uname IN VARCHAR2)
AUTHID DEFINER IS
 c        NUMBER;
 DDLStr CLOB := 'CREATE SEQUENCE ';
 retVal NUMBER;
 uid      dba_users.user_id%TYPE;
BEGIN
  c := dbms_sql.open_cursor;

  DDLStr := DDLStr || seqname;

  SELECT user_id
  INTO uid
  FROM dba_users
  WHERE username = dbms_assert.schema_name(uname);

  dbms_sys_sql.parse_as_user(c, DDLStr, dbms_sql.NATIVE, uid);
  retVal := dbms_sql.execute(c);
  dbms_sql.close_cursor(c);
END create_sequence;
/
```

```
Overload 4 syntax

dbms_sys_sql.parse_as_user(
c              IN NUMBER,
statement      IN CLOB,
language_flag IN NUMBER,
userid         IN NUMBER);
```

META7™

SQL*Net

Net Services Security

- Here's what Oracle says about Net Services aka SQL*Net

> Local listener administration is secure through local operating system authentication, which restricts listener administration to the user who started the listener or to the super user. By default, remote listener administration is disabled.

- For secure communications you need to consider the following parameters
(some of which require the Advanced Security Option)

  - NAMES.LDAP_AUTHENTICATE_BIND
  - NAMES.LDAP_CONN_TIMEOUT
  - NAMES.LDAP_PERSISTENT_SESSION
  - SQLNET.ALLOWED_LOGON_VERSION_CLIENT
  - SQLNET.ALLOWED_LOGON_VERSION_SERVER
  - SQLNET.AUTHENTICATION_SERVICES
  - SQLNET.CLIENT_REGISTRATION
  - SQLNET.CRYPTO_CHECKSUM_CLIENT
  - SQLNET.CRYPTO_CHECKSUM_SERVER
  - SQLNET.CRYPTO_CHECKSUM_TYPES_CLIENT
  - SQLNET.CRYPTO_CHECKSUM_TYPES_SERVER
  - SQLNET.ENCRYPTION_CLIENT
  - SQLNET.ENCRYPTION_SERVER

  - SQLNET.ENCRYPTION_TYPES_CLIENT
  - SQLNET.ENCRYPTION_TYPES_SERVER
  - SQLNET.EXPIRE_TIME
  - SQLNET.INBOUND_CONNECT_TIMEOUT
  - SSL_CERT_REVOCATION
  - SSL_CERT_FILE
  - SSL_CERT_PATH
  - SSL_CIPHER_SUITES
  - SSL_EXTENDED_KEY_USAGE
  - SSL_SERVER_DN_MATCH
  - SSL_VERSION
  - TCP.CONNECT_TIMEOUT
  - WALLET_LOCATION

Oracle Listener Port

- Have you changed the default port of your database from 1521 to something else to thwart an attack?
- Netstat can narrow down the choices an attacker must check in a single command
- Changing the port is item 2.11 on the CIS audit but it secures nothing

```
[oracle@gg00a dirprm]$ netstat -lntu
Active Internet connections (only servers)
Proto Recv-Q Send-Q Local Address         Foreign Address        State
tcp        0      0 0.0.0.0:5801          0.0.0.0:*              LISTEN

```

META7™

DDOS Attack

- A Distributed Denial of Service attack can make a database unusable by flooding it with connection requests

- The connection rate limiter feature in Oracle Net Listener enables a DBA to limit the number of new connections handled by the listener

- When enabled, Oracle Net Listener imposes a user-specified maximum limit on the number of new connections handled by the listener every second. Depending on the configuration, the rate can be applied to a collection of endpoints, or to a specific endpoint

```
LISTENER=
(ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1521)(RATE_LIMIT=yes))

LISTENER= (ADDRESS_LIST=
   (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1521)(RATE_LIMIT=5))
   (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1522)(RATE_LIMIT=10))
   (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1523))
)
```

```
CONNECTION_RATE_LISTENER=10
   LISTENER=
     (ADDRESS_LIST=
     (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1521)(RATE_LIMIT=yes))
     (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1522)(RATE_LIMIT=yes))
     (ADDRESS=(PROTOCOL=tcp)(HOST=)(PORT=1523)))
```

SQLNET.ALLOWED_LOGON_VERSION

- Specifies the minimum client version that is allowed to connect to the database
- Someone with a valid userid and password, but the wrong Oracle client version is prevented from making a connection

Explanation	Set the login version to 11. The higher setting prevents logins by older version clients that do not use strong authentication to pass the login credentials.
Validation	`grep -i ALLOWED_LOGIN_VERSION sqlnet.ora`
Finding	Allowed logon version not configured.
Action	Set `SQLNET.ALLOWED_LOGON_VERSION=11` to restrict access to version 11 clients.

META7™

- 38% of breaches are performed with stolen credentials ... 86% of records stolen are from breaches with stolen credentials
- To prevent someone with a valid userid and password from gaining access enable Valid Node Checking in your SQLNET.ORA file

```
valid_node_checking_registration_listener=on

tcp.invited_nodes=(sales.meta7.com, hr.us.mlib.com, 144.185.5.73)

tcp.excluded_nodes=(blackhat.hacker.com, mktg.us.acme.com, 144.25.5.25)
```

- "Best practice" is to hard-code in the IP addresses of
  - Application servers
    - This has the added benefit of forcing the organization to communicate with the DBA team when new application servers are added
    - If a new app server is not added to the invited list it cannot connect to the database
  - Reporting servers (Business Objects, Cognos, Crystal Reports, ...)
  - Replication servers (GoldenGate, Informatica, SharePlex...)
  - DBA team members

Explanation	This parameter in SQLNET.ORA causes the listener to matches incoming connection requests to invited and excluded node lists. A valid user-id/password combination is only valid if it comes in from an invited and unexcluded node.
Validation	`grep -i tcp.validnode_checking sqlnet.ora`

Finding	Valid node checking not enabled in the current PROD environment. The QA system contains the following:
	
	`VALID_NODE_CHECKING_REGISTRATION_LISTENER_SCAN3=OFF`
	`VALID_NODE_CHECKING_REGISTRATION_LISTENER_SCAN2=OFF`
	`VALID_NODE_CHECKING_REGISTRATION_LISTENER_SCAN1=OFF`
	`VALID_NODE_CHECKING_REGISTRATION_LISTENER = SUBNET`
	`VALID_NODE_CHECKING_REGISTRATION_MGMTLSNR=SUBNET`
	`REGISTRATION_INVITED_NODES_LISTENER_SCAN2=()`
	`REGISTRATION_INVITED_NODES_LISTENER_SCAN3=()`
	
	Which enables SUBNET level valid node checking but given that no lists are provided does not provide any security.

Action	Set `tcp.validnode_checking=YES` in $ORACLE_HOME/network/admin/sqlnet.ora

META7

Built-in Packages

- The Oracle database contains a number of built-in components that can be utilized to enable reading and writing to file systems
  - Secure data can be written
  - External files can be read
- Some have execute granted to PUBLIC and the public privileges should be revoked
- What you need to secure is
  - DBMS_ADVISOR
  - DBMS_LOB
  - DBMS_SQL
  - DBMS_XSLPROCESSOR
  - UTL_FILE

- Does this look like security by default?

```
SQL> SELECT DISTINCT grantee, table_name AS OBJECT_NAME, privilege
  2  FROM cdb_tab_privs
  3  WHERE table_name IN ('DBMS_ADVISOR',
                          'DBMS_LOB',
                          'DBMS_SCHEDULER'
                          'DBMS_SQL',
                          'DBMS_XSLPROCESSOR',
                          'UTL_FILE')
  4  AND grantee = 'PUBLIC'
5* ORDER BY 2;

GRANTEE    OBJECT_NAME        PRIVILEGE
--------   ----------------   -----------
PUBLIC     DBMS_ADVISOR          EXECUTE
PUBLIC     DBMS_LOB              EXECUTE
PUBLIC     DBMS_SCHEDULER        EXECUTE
PUBLIC     DBMS_SQL              EXECUTE
PUBLIC     DBMS_XSLPROCESSOR     EXECUTE
PUBLIC     UTL_FILE              EXECUTE
```

```
SQL> conn uwclass/uwclass@pdbdev
Connected.

SQL> CREATE TABLE uwclass.t (
  2   textcol CLOB);

Table created.

SQL>
SQL> DECLARE
  2    c CLOB;
  3    CURSOR scur IS
  4    SELECT text

META7™

118

- EXTERNAL TABLES
  - The CREATE TABLE privilege grants the privilege to create external tables
  - Does this make you feel secure?
  - Maybe you don't have a directory object pointing to $ADR_HOME/trace but what directory objects exist in your database by default?

```
CREATE OR REPLACE DIRECTORY bdump AS 'c:\app\oracle\diag\rdbms\orabase\orabase\trace\';

CREATE TABLE log_table (TEXT VARCHAR2(400))
ORGANIZATION EXTERNAL (
TYPE oracle_loader
DEFAULT DIRECTORY bdump
ACCESS PARAMETERS (
  RECORDS DELIMITED BY NEWLINE
  NOBADFILE NODISCARDFILE NOLOGFILE
  FIELDS TERMINATED BY '0x0A'
  MISSING FIELD VALUES ARE NULL)
LOCATION ('alert_orabase.log'))
REJECT LIMIT unlimited;

SELECT * FROM log_table;
```

Carefully monitor use of the CREATE ANY DIRECTORY privilege

- DBMS_SCHEDULER
  - First available in version 10gR1 file watchers became available with version 11gR2
  - A File Watcher is a program that watches for a file to be created

```
-- create job credential
exec dbms_scheduler.create_credential('uw_credential', 'uwclass', 'uwclass');

-- create program in disabled state
exec dbms_scheduler.create_program('file_watcher', 'stored_procedure', 'load_file', 1);

 -- define program argument
exec dbms_scheduler.define_metadata_argument('file_watcher', 'EVENT_MESSAGE', 1);

-- enable program
exec dbms_scheduler.enable('file_watcher');

-- create file watcher
exec dbms_scheduler.create_file_watcher('UW_FWatch', 'STAGE', 'democlob.txt', 'uw_credential');
```

- The Oracle database contains a number of built-in components that can be utilized to enable communications to the intranet and internet
- Configure access control lists with DBMS_NETWORK_ACL_ADMIN and do not grant privileges to the following packages without strict controls
  - DBMS_NETWORK_ACL_ADMIN
  - DBMS_NETWORK_ACL_UTILITY
  - UTL_HTTP
  - UTL_INADDR
  - UTL_MAIL
  - UTL_SMTP
  - UTL_TCP

- Does this look like security by default?

```
SQL> SELECT grantee, table_name
  2   FROM cdb_tab_privs
  3   WHERE table_name IN ('DBMS_NETWORK_ACL_ADMIN',
                           'DBMS_NETWORK_ACL_UTILITY',
                           'UTL_HTTP',
                           'UTL_INADDR',
                           'UTL_MAIL',
                           'UTL_SMTP',
                           'UTL_TCP')
  4   ORDER BY 2,1;

```

SQL Injection

SQL Injection

- 25% of all attacks are by SQL Injection ... and 89% of all data stolen is the result of a SQL Injection attack
- If you do not know how to attack your databases ... you cannot prevent an attack?
- To prevent SQL Injection attacks
  - Use Bind Variables
  - Use DBMS_ASSERT

```
SQL> SELECT dbms_assert.sql_object_name('UWCLASS.SERVERS')
  2  FROM dual;

DBMS_ASSERT.SQL_OBJECT_NAME('UWCLASS.SERVERS')
----------------------------------------------------------------
UWCLASS.SERVERS

SQL> SELECT dbms_assert.sql_object_name('UWCLASS.SERVERZ')
  2  FROM dual;
SELECT dbms_assert.sql_object_name('UWCLASS.SERVERZ')
       *
ERROR at line 1:
ORA-44002: invalid object name
ORA-06512: at "SYS.DBMS_ASSERT", line 383
```

Miscellaneous Topics

Recyclebin

- Tables contain data and when tables are dropped, unless the PURGE keyword is used, the table and its indexes remain queryable and recoverable in the recyclebin

- Always drop table with PURGE
  `drop table <table_name> PURGE;`

```
SQL> CREATE TABLE dropme (soc_sec_no VARCHAR2(11));

SQL> INSERT INTO dropme (soc_sec_no)
  2  VALUES ('523-14-0963');

SQL> COMMIT;

Security in the Oracle Cloud

- The OCI Cloud may not be available to you ... but many of its security features are and can be quickly adopted
- Here is Oracle's SQLNET.ORA

```
[oracle@db18c-ee-hp admin]$ more sqlnet.ora
SQLNET.ENCRYPTION_SERVER = required

SQLNET.CRYPTO_CHECKSUM_TYPES_SERVER = (SHA1)

SQLNET.CRYPTO_CHECKSUM_SERVER = required

ENCRYPTION_WALLET_LOCATION =
(SOURCE=(METHOD=FILE)(METHOD_DATA=(DIRECTORY=/u01/app/oracle/admin/orcl/tde_wallet)))

SQLNET.ENCRYPTION_TYPES_SERVER = (AES256, AES192, AES128)

NAMES.DIRECTORY_PATH = (TNSNAMES, EZCONNECT)

SQLNET.WALLET_OVERRIDE = FALSE

SQLNET.EXPIRE_TIME = 10

SSL_VERSION = 1.2

WALLET_LOCATION = (SOURCE=(METHOD=FILE)(METHOD_DATA=(DIRECTORY=/u01/app/oracle/admin/orcl/db_wallet)))
```

- The OCI Cloud may not be available to you ... but many of its security features are and can be quickly adopted
- Here is Oracle's LISTENER.ORA

```
[oracle@db18c-ee-hp admin]$ more listener.ora
# listener.ora Network Configuration File: /u01/app/oracle/product/18.0.0/dbhome_1/network/admin/listener.ora
# Generated by Oracle configuration tools.

LISTENER =

OEM and OMC

- The OEM development team has been split in half with one half continuing to work on OEM and the other half building the Oracle Management Cloud (OMC) and migrating functionality to OMC
- What will remain in OEM is basic functionality such as starting and stopping
- Monitoring activities are moving to OMC
- OMC will be available on-premise and in the cloud

Name	Description
Application Performance Monitoring	Diagnostic & Tuning Pack
Infrastructure Monitoring	Single Pane-of-Glass
Log Analytics	Splunk Killer
IT Analytics	Splunk Killer
Configuration & Compliance	Governance
Security Monitoring & Analytics	Security Warnings & Alerts
Orchestration	Process Automation
Dashboards	Business Intelligence
Explorers	Business Intelligence

META7™

- Securing the Perimeter has proven that its primary value is to companies selling products that claim to secure the perimeter
- Auditing is not security
- Passing audits is not security and provides a false sense of security
- What is wrong with the way our industry views security is that we must secure data as well as software
    - Oracle is generic software
    - We build our own database structure/layout/design
    - We build our own applications (APEX, JAVA, JavaScript, C#, Python, C++, PHP, Ruby)
    - We must also build our own security
    - Security is not done well or forgotten in the rush implement features and performance
    - We must assume break-ins will take place
- To begin securing data we must utilize the Oracle Database's built-in features
- To fully secure data we must enable built-in features and we must invest real effort ... not just throw money at the problem

- It is difficult to dig yourself out of a hole after the sides have fallen in
- Very few organizations have employees with the skill set required to secure their databases and operational environments: Less than 1% of DBA "training" involves security
- If you don't have the internal skills to know what to protect and how to protect it you need to go outside your organization and ask for help
